

TALIA G14527*

Data referring to Emilia-Romagna region

Plant

High-chilling-requirement June-bearer variety, suitable for continental climate, rustic of medium vigor. Upright, but compact habit, of high productivity (1 Kg/plant).

Flowering & Picking

Late flowering (+10 days Alba) at the same level of the foliage, late ripening time (+14 days Alba).

Fruit

High average size (29 g.), of conical shape, bright red color, and red flesh. Both shape and colour are uniform along all the picking period. High firmness and good resistance to handling. Better organoleptic characteristics than the period-competitors.

Agronomic Advices

An early plantation is not necessary. Talia can be cultivated in greenhouse and even better in open-field to make the most of its late ripening period. Tolerant to the most common strawberry diseases.
