

# TEA NF633\*

Data referring to Emilia-Romagna region

## Plant

Tea has medium vigour plant with elevated productivity (1 kg/plant).

It's particularly suggested for Continental areas like Central Europe. It's suitable for under cover growing systems and open field.

## Flowering & Picking

Flowering time is medium (+3 days Alba) and ripening time is late.

## Fruit

Fruit size is large (28 grams) with conical shape, firm flesh and good handling resistance.

The color is brilliant red.

Excellent organoleptic characteristics and long shelf-life.

## Agronomic Advices

We suggest an early tansplanting and to avoid waterlogging.

We are evaluating sensibility to the most common deseases.
